TAE-II

Title: Campus Navigation Mobile App

Name: Kanika Sharma

Roll NO: 13

Section: A

Semester: VI

Branch: Artificial Intelligence

Subject Teacher: Prof Krupali Dhawale

Introduction

The Campus Navigation Mobile App is designed to help new students easily find important locations within a college campus such as classrooms, libraries, cafeterias, and administrative offices. Many students face difficulty navigating large campuses during their initial days. This application provides a simple and user-friendly interface to guide them quickly to their desired locations.

Objective

The objective of this project is to design an intuitive mobile application interface using tools like Figma or Canva. The app focuses on improving campus navigation by providing a clear map, search functionality, and detailed information about locations.

Tools Used

- Figma
- Icons from UI libraries
- Mobile UI design components

Wireframes of Application Screens

Home Screen

The home screen acts as the main dashboard of the application. It provides quick access to commonly used locations.

Features:

- Search bar at the top
- Quick access icons for:
    - Classrooms
    - Library
    - Cafeteria
    - Admin Office
- Map preview
- Bottom navigation bar

Map Screen

The map screen shows the complete campus layout and allows users to view directions.

Features:

- Interactive campus map
- Location pins for buildings
- Zoom in / zoom out functionality
- Route guidance between locations

Search Screen

The search screen allows students to quickly find any campus location.

Features:

- Search bar
- Suggested locations
- Recent searches
- Category filters such as academic buildings, food places, and offices

Location Details Screen

This screen provides detailed information about a selected location.

Features:

- Building name
- Image of the location
- Description
- Opening hours
- Directions button
- Distance from current location

UI Design Principles Applied

Consistency

The same color scheme, fonts, and icon style are used throughout the application to maintain a consistent user experience.

Simplicity

The design focuses on minimal elements and clear layout so that users can easily understand and navigate the app.

Visibility

Important features like search, map, and directions are clearly visible and easily accessible.

Icons, Colors, and Typography

Icons

Simple and recognizable icons are used for:

- Library
- Cafeteria
- Classrooms

- Offices
- Navigation

Colors

A student-friendly color scheme is used:

- Primary Color: Blue (trust and clarity)
- Secondary Color: White (clean interface)
- Accent Color: Green for directions and highlights

Typography

Clear and readable fonts are used such as:

- Headings: Bold Sans Serif
- Body Text: Regular Sans Serif

Prototype Flow

The prototype demonstrates how users move between screens:

1. **Home Screen → Search Screen**
   User taps the search bar to find a location.
2. **Home Screen → Map Screen**
   User taps the map icon to view the full campus map.
3. **Search Screen → Location Details**
   After selecting a location from search results.
4. **Location Details → Map Screen**
   User taps "Get Directions" to view the route on the map.

This flow helps users quickly locate buildings and navigate across the campus.

Conclusion

The Campus Navigation Mobile App provides a simple and efficient solution for students to navigate their campus. By applying effective UI design principles such as simplicity, consistency, and visibility, the app ensures a smooth and user-friendly experience. The prototype demonstrates how students can easily search for locations, view details, and follow directions within the campus.
